Italian — Native
English — Upper-Intermediate

SALVATORE LOMBARDO (Backend & Cloud Developer)
PROFILE
Backend developer (~1.5 years) working in Python on AWS: FastAPI, Flask, Django, PostgreSQL, Docker, Terraform. Build event-driven systems and run LLMs in production pipelines (LangGraph, semantic search on pgvector). Focused on cloud security and EU regulatory compliance (NIS2, DORA, GDPR, AI Act). Preparing for AWS Solutions Architect – Professional (SAP-C02).
EXPERIENCE
Public Grant Aggregator and AI Analyser
<i>FastAPI · Scrapy · LangGraph · PostgreSQL + pgvector · Redis · React · Docker</i>
<i>Backend Developer – 2025/26</i>
Automatically scans dozens of regional, national and EU funding portals, summarises each call and notifies only the subscribers whose profile matches. Replaces manual monitoring where deadlines and requirements are caught late or missed entirely.
– Event-driven pipeline on Redis Streams: Scrapy + Playwright scrapers, a LangGraph service for summaries, application guidance and pgvector embeddings, email alerts via Celery.
– FastAPI backend with JWT auth (refresh tokens in httpOnly cookies, with rotation), full-text and semantic search (cosine similarity on pgvector, HNSW index).
– Six-node LangGraph: metadata extraction, summary, classification, guidance, validation, vector storage. LLM and embedding providers configurable via env.
– Multi-layer deduplication on ingestion: PostgreSQL unique constraint, idempotent Redis Streams consumers and SHA-256 content hashing on uploads. A full re-run discards 100% of duplicates without ever invoking the AI layer.
– Retry, backoff and dead-letter handling on failures; containerised services and unit tests.
Multi-Agent Personal Assistant (Telegram)
<i>LangGraph · FastAPI · PostgreSQL · Docker · Next.js · OpenAI / Anthropic</i>
<i>Personal project, private beta. Active development</i>
Multi-agent conversational system for everyday life management: tasks, notes, calendar, finances. Built to consolidate in one access point (Telegram) information that's normally scattered across several tools.
– Telegram bot (text and voice via Whisper) on a LangGraph orchestrator: intent classification, confidence-gated routing, domain agents with tool-calling over FastAPI and multi-tenant Postgres (RLS).
– Provider-agnostic LLM layer, structured logging, rate limiting, CI/CD with a coverage gate, deployed on Railway and Vercel.
Membership Management System — Cultural Association
<i>Flask · PostgreSQL</i>
<i>Backend Developer - 2024</i>
Runs the annual season-ticket campaign of a music association: members, numbered cards handed out to operators, payments, events and attendance in one system, with no manual reconciliation at the end of the campaign. It previously all ran on spreadsheets, with cards assigned by hand, duplicate member records and no reliable history across years.
– Service layer with role-based access (admin/operator), activity audit trail and test suite.
– Multi-year campaign history, fuzzy duplicate matching on members, contact export (Excel/CSV/VCF), analytics dashboard (trends, payments, retention).
– GDPR compliance: member data export, right to erasure via anonymisation that preserves aggregate statistics, personal-data access logging.
– Digital membership card and event check-in via QR code with signed tokens: subscription verification and attendance logging. <u>(Code: GitHub)</u>
OTHER
<i>Jazz Guitar Teacher and Musician – 2013–present</i>
<i>Artistic Co-Director, Music Association – 2020–present</i>
EDUCATION
Technical Diploma, Computer Science and Programming – ITIS Palazzolo A. 2010
BA in Jazz Guitar – Conservatory ofMessina A. Corelli 2013
MA in Jazz Orchestra Composition and Arranging – Conservatory of Messina A. Corelli 2016
